

Introducing the simplest SAN on the planet: The HP StorageWorks MSA1000 Small Business SAN Kit

NEW! Easy to buy: One part number includes everything you need – hardware and software - in one box.

NEW! Easy to install: Step-by-step installation poster and installation Wizards make it virtually foolproof...less than 25 mouse clicks and your SAN is installed! Data migration can happen in minutes with HP DAS-to-SAN (DtS).

NEW! Easy to manage: One management console for Microsoft Windows 2003 Server manages the switch, HBAs and Modular Smart Array (unlike other solutions which have multiple management software packages and/or require hard coding).

NEW! Easy to upgrade: Add the HP StorageWorks MSA1000 Small Business SAN HA (High Availability) Kit for redundant, dual-path, storage access — add up to 7 servers — and up to 12TB of online storage.

NEW! Best value: Thousands less than building a SAN from scratch, plus dramatically lower Total Cost of Ownership (TCO) thanks to revolutionary hardware and incredibly simple management software. Volume management, multi-path, switch and HBA management software included at no extra charge.

NEW! HP StorageWorks MSA1000 Small Business SAN Kit (A7450A)
